Controlsoft Case Study—Dubai

Dubai International Airport:

Staging Area — KeyMaster Pro access control and car parking system that manages the number of vehicles and waiting time permitted for Hotel Courtesy Buses and Taxis.

Vehicle permits are purchased from the airport and KeyMaster Pro counts the number of vehicles in / out to ensure that the number of vehicles permitted at any time is not exceeded.

If the allowed waiting time is exceeded then KeyMaster Pro generates a report and an additional waiting charge is billed to the permit holder by the airport.

Hotel Meet & Greet — KeyMaster Pro access control integrated with a Plasma Screen display system. On entering the arrivals area, visitors can easily identify their hotel "meet & greet" point via a series of plasma screens displaying the different hotels' names.

Hotels purchase the plasma screen "space advertising" from the airport. When a hotel employee presents a valid card at the entrance point, the employee is granted access to the area and the hotel name is automatically displayed up on a randomly selected available screen until that employee leaves the area.

The hotel representative stands underneath their allotted screen to meet their guests. Some hotels purchase several employee permits and can therefore be displayed on several screens.

KeyMaster Pro counts the hotel employees in / out to ensure that only the allotted number of hotel employees are permitted in the area at any time.

Project Division — KeyMaster Lite access control and time & attendance system with Fingerprint readers.

Cargo Village — KeyMaster Lite access control system.
